

# Electronic Lock Upgrade

Increase teller efficiency by getting rid of old mechanical combination locks and replacing them with electronic locks

- Easier and more convenient to enter combinations, allowing tellers quicker access to valuables
- Save money on service calls. Locks do not require a technician or locksmith to change the combination
- Most locks can have multiple users with their own combination
- Greater protection against attacks and combination manipulation
- Reduce the number of wrong combination attempts
- The upgrade is simple: these locks have been designed to replace existing mechanical combination locks on most chests, safes\*, teller lockers, and undercounter products
- Locks have easy readability with front read dials for higher mounting

## Kaba Mas Auditcon 252 Vertical Lock

Designed to combine the convenience of an electronic lock and the reliable security of a mechanical lock with enhanced security. With up to 20 programmable users and a manager and master combination, this lock can be programmed to need dual access to enter the cabinet/chest. The Auditcon can also be programmed with auditing software to collect date and time information to see who enters the cabinet/chest and when. And because it self-generates power, there's no need to ever replace a battery.

## LA GARD ComboGard Pro Series

The ComboGard Pro offers a good balance between convenience and security by allowing up to 9 programmable users on each lock with sequential auditing software, so it's easy to see who enters the cabinet/chest throughout the day. The ComboGard also has the ability to be programmed to need dual access entry.

## LA GARD Basic Series

As the most basic of these offerings, the LA GARD Basic lock is a single user lock with no programming capabilities (including auditing software or dual access entry). This lock is the next step up from a mechanical lock, except now tellers don't have to squint to see tiny numbers on a dial and can quickly access items inside a cabinet/chest.
